

Crack Attack™

Concrete Crack Filler

PRODUCT APPLICATION GUIDE

CRACK ATTACK™ concrete crack filler is a two component, hybrid polymer crack fill and spall repair system with a very rapid-cure time.

Tools needed: Measuring container, trowel

CRACK ATTACK™ concrete crack filler is designed for the treatment of cracked and spalled concrete. Area must be properly prepared and dry prior to CRACK ATTACK™ concrete crack filler application.

Application:

Step 1. Add 1 unit of measure part B to 1 unit of measure part A in a clean measuring cup and swirl in a circular motion 5-6 times to mix the two components.

Step 2. Crimp the mixing cup to form a v-spout and pour CRACK ATTACK™ concrete crack filler over the crack or spalled area to be treated. Use a squeegee or putty knife to push excess material into area being treated.

Step 3. If the crack or spalled area is wide or deep, sand may be added to the crack or spalled area followed by mixed CRACK ATTACK™ concrete crack filler to saturate the sand. It may be necessary to build layer upon layer until level with the surface.

Step 4. Once level, strike off last wet layer with trowel to smooth, or wait until dry and grind smooth.

Tips:

When using the 600 ml dual barrel caulking gun, simply follow the instructions provided with the containers and use as a regular caulking gun.
