

INFUSED™

Concrete Stain

PRODUCT APPLICATION GUIDE

INFUSED™ is a neutral based stain used for staining concrete, antiquing and highlighting concrete and decorative overlay surfaces. INFUSED™ concrete stain is designed to be used with ColorShade™ universal colorant.

Tools Needed:

Pump up sprayer, cyclone mixer, high speed drill, clean mixing pail, clean measuring container.

Application:

Step 1. Measure out desired amount of clean, potable water in a measuring container.

Step 2. Add desired amount of ColorShade™ universal pigment to water and mix with cyclone mixer and high speed drill for several minutes to ensure complete pigment dispersion. This happens by shearing or slicing the pigment particles.

Step 3. Add desired amount of INFUSED™ concrete stain and mix again for 20-30 seconds.

Step 4. Pour mixed contents into clean pump up sprayer and pump up tightly.

Step 5. Spray contents onto surface to be stained at a rate of approximately 200-300 square feet per diluted gallon. Be sure to shake sprayer periodically to avoid settling.

Step 6. Allow INFUSED™ concrete stain to dry before proceeding to next step.

Step 7. Clean up with soap and water.
